PROFILE

BI & Data Analytics professional with 5+ years across healthcare data and analytics. I work directly with stakeholders to understand their needs, translate them into KPIs and data models, and deliver end-to-end solutions: Power BI dashboards, Python-based decision-support tools and AI-driven automation. Currently the sole BI lead for the Saudi Ministry of Health's NHEOC, owning a 30-dashboard roadmap covering 20 regions, and building supply chain tools for KFSHRC and HHC.

SKILLS

Data & BI: SQL (SQL Server), Power BI (data modeling, DAX, RLS, paginated reports), FineBI, Excel VBA

Python & AI: Python (pandas), NLP (sentence transformers), LLM and RAG, Machine Learning, Streamlit, R

PROFESSIONAL EXPERIENCE

TAAM Consulting (Tamer Healthcare), Riyadh, KSA — 04/2025 – Present

Data Science & Planning Data Analyst

Ministry of Health (MOH), NHEOC (National Health Emergency Operations Center)

- Sole BI consultant on the NHEOC dashboards and reports program: manage the client relationship on site and gather needs from several departments (Emergency, Operations, Cybersecurity), turning them into clear KPIs and data models.
- Own a 30-dashboard roadmap end to end, from requirements and data modeling to Power BI delivery, stakeholder presentations and progress tracking. with 4 dashboards currently in production.
- Built Power BI dashboards on the live operational database covering 20 regions, with Row-Level Security (RLS) so each region only sees its own data.
- **Hajj 1447 real-time dashboard:** gave live visibility on site readiness and emergencies across the 3 holy sites (Mina, Arafat, Muzdalifah), used by the operations team during Hajj to spot critical incidents and act immediately.
- **Monthly compliance report:** replaced a manual region-by-region check and Excel follow-up. The stakeholder now sees at once which regions have submitted complete data and sends the report directly to them.
- **Recurrent incident escalation report:** flags facilities with repeated incidents over a rolling 3 months, using clear escalation levels (monitor, follow-up, critical), so teams can act directly on high-risk facilities.
- **Incident recovery dashboard:** national view of incidents and recovery plans by region, facility and category.

King Faisal Specialist Hospital & Research Centre (KFSHRC), Supply Chain

- **Expedite planning tool (Excel VBA):** automated the weekly identification of purchase orders to expedite, based on stock coverage and delivery rules across 36 product categories. Cut a manual task of 2+ days down to 5 minutes.
- **Supplier performance scorecard (Power BI):** delivered a dashboard scoring suppliers on 5 KPIs (on-time delivery, in-full delivery, price, SLA, quality) and classifying them as preferred, needing improvement or underperforming, to support procurement decisions.
- **Replenishment forecasting tool (Power BI):** built a planning tool covering forecast, inventory, purchase orders, expiry risk and ABC-XYZ analysis to support inventory decisions.
- **Supply chain command center:** working with Vantiq on the KFSHRC command center: define the KPIs and follow up on the implementation.

Health Holding Company (HHC), Supply Chain

- Ad hoc supply chain analysis across hospital clusters: out-of-stock, overstock and near-expiry risks, to support planning and procurement decisions.
- **Stock reallocation engine (own initiative, Python, Streamlit):** designed and built a tool that matches excess stock in one cluster with shortages in another across 20 hospital clusters, prioritizing zero-stock items and the closest donor cluster. A first run identified around SAR 200M of stock that could be reallocated.
- **NLP price matching (Python, sentence transformers):** for a new reference lab bringing specialized tests in-house, extracted NUPCO tender and pricing data from PDFs and matched it to 700+ target tests, giving the finance team the price base for its cost analysis.

Braincell, Riyadh, KSA — 11/2024 – 04/2025

Data Analyst

- Built BI dashboards in FineBI for healthcare clients (MOH, HHC), in a team of 4 analysts, covering blood bank and public health reporting.
- Cleaned and prepared data in SQL, and designed KPIs and visuals to support business reporting and decision-making.

EARLIER EXPERIENCE: CLINICAL RESEARCH & BIOBANKING DATA

- **ICON plc (CRO), Paris** · Clinical Data & Research Site Manager · 2022 – 2023: data validation on a phase IV respiratory study across multiple sites, source data verification, query and deviation tracking, GCP compliance.
- **INSERM, Paris** · Clinical Data & Research Associate · 2021 – 2022: structured EHR and REDCap research data and produced weekly data quality reports.

- **Centre Antoine Lacassagne, Nice** · Biobanking Data Quality Assistant · 2020: LIMS data validation and quality controls to prepare for ISO 20387 certification.
- **Universität zu Lübeck, Germany** · Biobanking Data & Research Manager · 2019: statistical analysis in R that led to the biobank's standard ccfDNA extraction method; presented at European Biobank Week 2019.

PERSONAL PROJECTS

- **CuraLens, Healthcare Supply Chain Analytics Platform (in progress):** end-to-end platform combining a SQL data warehouse, Power BI dashboards and an LLM decision-support layer.
- **Supply Chain AI Agent:** multi-agent decision-support system for inventory reallocation, with LLM-based analysis and a Streamlit interface.

EDUCATION

Data Science & AI Diploma, Le Wagon 2024
MSc Biobanks & Complex Data Management, High Honours, Université Nice Côte d'Azur 2018 – 2020
BSc Life and Health Sciences, Université Nice Côte d'Azur 2014 – 2018
